IMPORTANT – PLEASE READ

As fresh lumber acclimates to its new environment, the natural tendencies of the tree can show itself in the form of checks, or “cracks” in the lumber. In almost all cases this is normal and it will not affect the structural integrity of your play set.

Cosmetic defects that do not affect the structural integrity of the product, or natural defects of wood such as warping, checking or any other physical properties of wood that do not present a safety hazard, are not covered by this warranty. Defects that develop because the product is exposed to extreme climate conditions are not covered by this warranty. Defects that develop as a result of faulty or improper installation of the product are also not covered by this warranty.

Most cracks are not warrantable, however if you believe that the integrity of your play set is compromised by this natural occurrence, please follow the warranty claim procedure found at www.gorillaplaysets.com. Click on the “Customer Care” tab on the left hand side of the page, then click on “Warranty Claim” and follow the instructions.

We appreciate your purchase and know that you will enjoy your play system for many years to come.

Quality Lumber

At Gorilla Playsets, we use only the finest, hand selected lumber available. You can be assured that our lumber is strong, durable, and conforms to the national standards for use in children’s play equipment. It’s this quality that allows us to offer a limited lifetime warranty on the lumber used in our play sets.
Limited Manufacturers Warranty

Gorilla Playsets® (“Gorilla”) warrants its play sets to be free from defects in workmanship and materials, under normal use and conditions at its original installation, for the lifetime of the product for structural wood components and for two years for all other components (e.g., hardware, plastics, tarps, rope ladder, etc.) except Super Scoop Slides™ and Super Tube Spiral Slides™.

Gorilla warrants its Super Scoop Slides™ and Super Tube Spiral Slides™ to be free from defects in workmanship and materials, under normal use and conditions, for the lifetime of the product.

Cosmetic defects or natural defects of wood (e.g., warping, seasonal checking or cracking, knots, or knot holes, etc.) that do not affect the structural integrity of the product are not covered by this warranty. Defects that develop because the product is exposed to extreme climate conditions, excessive water exposure, lumber that has been damaged by wood boring bees, or defects that develop as a result of faulty or improper installation of the product, are not covered by this warranty. Fading, discoloration, or molding of any wood part or accessory, cracks in plastic components, surface rust on hardware, and chips on powder coated materials are not considered defects in material as long as they do not affect the functionality or structural integrity of the part or component.

It is the owner’s responsibility to properly maintain the play set. Instructions for proper maintenance can be found on Gorilla’s website. Imperfections or defects that develop because of a failure to properly maintain the play set are not covered by this warranty.

Gorilla will repair or, at its discretion, replace any part within the stated warranty period that is defective in workmanship or materials. This decision is subject to verification of the defect, which, at Gorilla’s discretion, may be accomplished by submitting photographs or by delivery of the defective part to Gorilla. Any warranty claim must include proof of purchase, including the date of purchase. In addition, within the first 30 days from the date of purchase, Gorilla will replace any parts discovered to be missing from or damaged in the original packaging.

This warranty is valid only if the product is used for the purpose for which it was designed and installed at a residential, single-family dwelling. This warranty is void if the product is used in a commercial or institutional setting. This warranty does not cover (a) products that have been damaged by acts of God, negligence, misuse, or accident, or that have been modified or repaired by unauthorized persons; (b) the cost of labor; or (c) the cost of shipping the product, any part, or any replacement product or part.

GORILLA DISCLAIMS ALL OTHER REPRESENTATIONS AND WARRANTIES OF ANY KIND, EXPRESS, IMPLIED, STATUTORY, OR OTHERWISE, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. GORILLA WILL NOT BE LIABLE FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES. This warranty is valid only in the United States of America, is nontransferable and does not extend to the owners of the product subsequent to the original purchaser. Some states do not allow limitations on implied warranties or exclusion of incidental or consequential damages, so these restrictions may not be applicable to you. This warranty gives you specific legal rights. You may also have other rights which vary from state to state.
IMPORTANT SAFETY GUIDELINES

This product is intended for residential use only and not intended for use in any public setting. A safety surface such as mulch or recycled tire should be used under the play set to prevent injury from falls. Also a 6 foot safety zone should be used around the entire play set.

As with any home project, good judgment and respect for power tools will greatly reduce the risk of injury. Gorilla recommends you follow all tool manufacturers’ safety guidelines. Always wear eye protection and safety gloves to prevent injury. In several phases of construction two people may be required for lifting and securing of lumber. While play set is being constructed, please keep children off the equipment until the project is complete. Bolts and screw heads should be checked regularly for tightness. The ground ladder, rope ladder, slide, swings and other areas where children spend a majority of their playtime should be checked more frequently.

Gorilla shall not be liable for incidental, indirect or consequential damages or injuries that result from the building and/or playing on our play sets. Adult supervision is recommended anytime a play set is being used.

Safety and Maintenance Tips for Your New Play Set:

NOTE: Your children’s safety is our #1 concern. Observing the following statements and warnings reduces the likelihood of serious or fatal injury. Please review these safety rules regularly with your children.

- Each play set (Unit A and Unit C) is designed for the use of 4 occupants who have a combined weight not exceeding 800 pounds on the elevated decks. Unit B (Bridge) is designed for the use of 4 occupants who have a combined weight of 600 pounds total: 300 pounds on the swing area and 300 pounds on the bridge platform. This makes a total unit capacity of 12 occupants who have a combined weight of 800 + 800 + 600 = 2200 pounds. (This weight does not include the picnic table area)
- On-site adult supervision is required.
- Teach children not to walk close to, in front of, behind, or between moving swings or other moving playground equipment.
- Teach children to sit in and never stand on swings
- Teach children not to twist the chains and ropes and not to loop them over the swing beam, since this may reduce the strength of the chain or rope.
- Teach children not to jump from swings or other playground equipment in motion.
- Teach children not to push empty seats. The seat may hit them and cause serious injury.
- Teach children to sit in the center of the swings with their full weight on the seats.
- Teach children not to use the equipment in a manner other than intended.
- Teach children to always go down slides feet first. Never slide headfirst.
- Teach children to look before they slide to make sure no one is at the bottom.
- Teach children to never run up a slide, as this increases their chances of falling.
- The parents should have the children dress appropriately with well-fitting shoes. Loose clothing such as scarves and ponchos should not be worn. Always take off, tie up or tuck in cords and drawstrings on children's clothing. These things can get caught on playground equipment and strangle a child.
- Teach children not to climb when the equipment is wet.
- Teach children to never jump from a fort deck. They should always use the ladder, ramp or slide.
- Teach children to never crawl or walk across the top of monkey bars.
- Teach children to never crawl on top of a fort roof.
- Verify that any suspended climbing ropes, chains, or cables are secured at both ends and that they cannot be looped around an adult hand.
- Teach children not to attach items to the playground equipment that are not specifically designed for use with the equipment, such as, but not limited to, jump ropes, clothesline, pet leashes, cables and chain as they may cause a strangulation hazard.
- Teach children to never wrap their legs around swing chain.
- Teach children to never slide down the swing chain.

WARNING: Children must NOT use this play set until unit has been completely assembled and inspected by an adult to insure set has been properly installed.
Playgrounds should be inspected on a regular basis. If any of the following conditions are noted, they should be removed, corrected, or repaired immediately to prevent injuries.

• Hardware that is loose, worn or that has protrusions or projections.
• Exposed equipment footings.
• Scattered debris, litter, rocks, or tree roots.
• Splinters, large cracks, and decayed wood components.
• Deterioration and corrosion on structural components, which connect to the ground
• Missing or damaged equipment components, such as handholds, guardrails, swing seats.
• Check all nuts and bolts frequently during the usage season and tighten as required. (But not so tight that you crack the wood) We recommend you check the swing beam and hardware often due to wood expansion and contraction. It is particularly important that this procedure be followed at the beginning of each season.
• Remove plastic swing seats and take indoors or do not use when the temperature drops below 32°F.
• Oil all metallic moving parts monthly during the usage period.
• Check all coverings for bolts and sharp edges twice monthly during usage season to be certain they are in place. Replace when necessary. It is especially important to do this at the beginning of each new season.
• Check swing seats, ropes, cables and chains monthly during usage season for evidence of deterioration. Replacement should be made of any swing seat that has developed cracks in the plastic seats. Ropes, cables and chains should be removed and replaced if excessive wear is found. Contact Gorilla for warranted replacement parts.
• For rusted areas on metallic members such as monkey bars, hand supports brackets, etc.; sand and repaint, using a non lead-based paint meeting the requirements of Title 16 CRF Part 1303.
• Inspect wood parts monthly. The grain of the wood sometimes will lift in the dry season causing splinters to appear. Light sanding may be necessary to maintain a safe playing environment. If you are treating your play set with stain regularly, it will help prevent severe checking/splitting and other weather damage.
• Once or twice a year, depending on your climate conditions, you must apply some type of protection (sealant) to the wood of your unit. Prior to the application of sealant, lightly sand any “rough” spots on your set. Please note this is a requirement of your warranty.
• Creating and maintaining the play set on a level location is very important. As your children play, your play set will slowly dig its way into the soil, and it is very important that it settles evenly. Make sure the play set is level and true once each year or at the beginning of each play season.
• Rake the playground surface periodically to prevent compaction and maintain appropriate depths.
• Disposal Instructions: When the play set is no longer desired, it should be disassembled and disposed of in such away that no unreasonable hazards will exist at the time the unit is discarded.
Play Set Surfacing Recommendations:

Below are some of the recommendations that the U.S. Consumer Product Safety Commission (CPSC) offers from its Handbook for Public Playground Safety. The guide can be downloaded in full at www.cpsc.gov/cpscpub/pubs/325.pdf

1. Protective Surfacing - Since almost 60% of all injuries are caused by falls to the ground, protective surfacing under and around all playground equipment is the most critical safety factor on playgrounds.

Certain manufactured synthetic surfaces also are acceptable; however, test data on shock absorbing performance should be requested from the manufacturer.

Asphalt and concrete are unacceptable. They do not have any shock absorbing properties. Similarly, grass and turf should not be used. Their ability to absorb shock during a fall can be reduced considerably through wear and environmental conditions.

Certain loose-fill surfacing materials are acceptable. Surfacing materials are acceptable, such as the types and depths shown in the table.

*This data is from tests conducted by independent testing laboratories on a 6-inch depth of uncompressed shredded tire samples produced by four manufacturers. The tests reported critical heights, which varied from 10 feet to greater than 12 feet. It is recommended that persons seeking to install shredded tires as a protective surface request test data from the supplier showing the critical height of the material when it was tested in accordance with ASTM F1292.

It should be recognized that all injuries due to falls cannot be prevented no matter what surfacing material is used.
2. Fall Zones - A fall zone, covered with a protective surfacing material, is essential under and around equipment where a child might fall. This area should be free of other equipment and obstacles onto which a child might fall. Stationary climbing equipment and slides should have a fall zone extending a Minimum of 6’ in all directions from the perimeter of the equipment.

Swings should have a fall zone extending a minimum of 6’ from the outer edge of the support structure on each side. The fall zone in front and back of the swing should extend out a minimum distance of twice the height of the swing as measured from the ground to the top of the swing support structure.

**LEVELING YOUR FORT DURING ASSEMBLY**

- Complete the steps which will be the basic frame of the fort (i.e. four corner posts with base (sand box boards) and deck supports)
- Position in the most level area chosen for the play set, keeping in mind the location and size of the swing beam, ladder, slides, etc. that extend off the fort.
- Once the frame is in the final position, check for vertical and horizontal levelness to determine which side(s) will need to be dug into the ground to level the play set.
- With a shovel, score the ground around the outside edges of the sandbox boards on the ‘high’ side of the fort. This is the area that will be dug in. Make sure to score deep enough; the scored lines will be your digging template.
- Push the frame off and away from the scored area, far enough to dig and remove dirt to reach the appropriate depth.
- Dig a channel along the scored line(s) for the base of the fort (corner post and sandbox boards) to rest into. Dig the channel(s) to the same level depth. The bottom of the channel(s) should be level to each other so your frame doesn’t teeter or rock because the channel(s) are uneven.
- Once you have removed enough grass and dirt, slide/push the frame into the channel(s). Place a level on the vertical and horizontal boards of the frame to determine if enough soil, or too much, was removed.
- Repeat this process until the basic frame is plumb and level and in its final position before completing the rest of the assembly.
- Measure to make sure fort is square.

**Important:** if you require a channel depth of more than 6”, then we recommend you have your play set area professionally graded before completing assembly.

*Example Play area:*

The diagonal measurements should be the same from corner post to corner post. If not, adjust corner posts so that the distance is equal.

- Area to be scored and channeled for levelness
General Info to Review Before Installation

• Depending on your experience, assembly of Gorilla Playsets can take as little as 6 hours up to 30 hours, depending on size, after inventory of parts; therefore, we recommend you set aside a full two days for assembly.

• Identify all of the parts for your play set. Empty each box and lay out boards so you can see each part. Your instruction book will have detailed drawings that will make it easy for you to recognize individual parts. Keep all hardware and metal parts separate from wooden pieces.

• After everything is laid out, check carefully to ensure all parts are present. Make sure there are no broken boards.

• Find an area to sort your hardware. It is best to open the hardware on a solid surface so that you do not lose any pieces in the grass. This will save time and familiarize you with all the different pieces in the hardware bag.

• Important note: Wood has some natural defects such as knots, surface cracks, etc… We reject parts that are structurally defective. We use a high quality lumber in our structures; however, you should inspect each part for splinters or rough spots and sand them smooth to prevent injury.

• After familiarizing yourself with all of the components, read all instructions thoroughly. Reading instructions after you have studied the parts will help you understand more clearly the installation process, and help to eliminate unnecessary mistakes.

• Pay close attention to the diameter and length of each bolt and screw.

• Never tighten hardware completely at first. It helps to have some adjustment for bolt alignment while you are attaching parts together. After everything is square, tighten each joint.

• After the main unit is assembled it is critical that the floor is level and square. If the main frame is not level, the walls and floor will be out of square.

• After you complete installation, make sure every bolt, screw, and nut is tight, and every board is secure. Wood will expand and contract with the seasons.

• Check all bolt connections and swing hangers seasonally.

• Place the set on level ground, not less than 6ft from any structure or obstruction such as a fence, garage, house, overhanging branches, laundry lines, or electrical wires.
This page is a list of definitions and explanations used throughout our instructions to aid you in the assembly of your play set.

**Offset Holes** - Throughout the installation procedures we will refer to parts with offset holes. This refers to the orientation of the holes on the board. An offset hole is one that is closer to one side than it is the other or in other words, it is not centered on the board. In the procedures you will be instructed to attach the boards with the holes offset up or with the holes offset down. This refers to which side of the board the hole/holes should be closer to. Offset holes up= hole/holes will be closer to the top of the board. Offset holes down= hole/holes will be closer to the bottom of the board. Note: some parts do not have offset holes, but instead the holes are on center. Therefore there will not be any reference to how to offset these parts.

**EXAMPLE OF OFFSET HOLES UP**

**EXAMPLE OF OFFSET HOLES DOWN**

**Counter-sunk holes** - Many of the parts that will be used have counter-sunk holes. A counter-sunk hole is one that surrounds one side of a thru hole, but does not extend through the wood it's self. When using a counter-sunk hole the bolt will be inserted through the thru hole and either the head of the bolt and washer or nut and washer will occupy the counter sunk hole.

**Lag Screws** - Lag screws are used in the construction of our play sets to enhance the structural integrity of the unit. There will not be predrilled holes in the post for lag screw installation. Lag screws are self-tapping, though if you are using a manual socket wrench it may be necessary to tap the head of the lag screw with a hammer. You should also be sure to tighten the lags completely. Power tools such as an impact wrench or power drill should have enough torque to drive the lag screws without using a hammer, but make sure not to over tighten as this can cause the threads to “strip out” in the post.
Please familiarize yourself with the manual, parts/components and general construction process of your new playset before getting started.

3: ATTACH EACH BLOCK SUPPORT TO THE CORNER POSTS WITH 3/8" X 6-1/2" CARRIAGE BOLTS WITH TORQUE WASHERS ON THE OUTSIDE AND 3/8" WASHERS WITH 3/8" LOCK NUTS ON THE INSIDE. COVER ANY EXPOSED THREADS WITH BOLT CAPS.
1: LOCATE TWO 2 X 6 X 36-3/4" SANDBOX BOARDS.

2: USE A CARPENTERS FRAMING SQUARE TO MAKE SURE THE SANDBOX BOARDS ARE SQUARE TO THE CORNER POSTS BEFORE Attaching THE SANDBOX BOARDS. EACH SANDBOX BOARD SHOULD BE FLUSH TO THE SIDE AND BOTTOM OF THE CORNER POST.

3: ATTACH EACH SANDBOX BOARD (OFFSET DOWN) TO THE BOTTOM OF THE CORNER POSTS WITH 3/8" X 3-1/2" LAG SCREWS AND 3/8" WASHERS.
STEP 4: DECK SUPPORTS

1: LEVEL THE FOUR 2 X 6 SANDBOX BOARDS AT THE BASE OF THE TOWER. MAKE SURE THE CORNER POSTS ARE SQUARE TO EACH OTHER BY MEASURING DIAGONALLY INSIDE THE BASE BETWEEN THE CORNER POSTS. IF THE DIAGONAL DIMENSIONS ARE THE SAME THEN THE POSTS ARE SQUARE. LOCATE TWO 4 X 4 X 36-3/4" DECK SUPPORTS.

2: PLACE THE DECK SUPPORTS ON TOP OF THE BLOCK SUPPORTS. THE ENDS OF THE DECK SUPPORT SHOULD BE FLUSH TO THE SIDE OF THE CORNER POSTS.

4: SECURE THE CHAIN ENDS TOGETHER WITH A QUICK LINK. THERE SHOULD BE A 2" OR LESS GAP BETWEEN THE CLATTER BRIDGE DECK BOARD AND THE BLOCK SUPPORT. THIS MEANS THAT YOU MAY NOT BE CONNECTING THE ABSOLUTE END LINKS OF THE CHAIN TOGETHER. YOU MAY HAVE TO CONNECT THE SECOND, THIRD, FOURTH LINKS AND SO ON TOGETHER TO ACHIEVE THE 2" OR LESS GAP. ANY EXCESS CHAIN HANGING DOWN CAN BE LOOPED AND HOOKED ON THE QUICK LINK BEFORE CLOSING THE QUICK LINK.

5: PASS THE END OF EACH CHAIN ON THE OTHER END OF THE CLATTER BRIDGE DECK THROUGH THE HOLES YOU JUST DRILLED IN THE PLAY SET BLOCK SUPPORT.

6: AGAIN, SECURE THE ENDS TOGETHER WITH A QUICK LINK AND ADJUST THE CHAINS UNTIL A 2" GAP IS ACHIEVED AS DESCRIBED IN SUBSTEP 4 ABOVE. SHOULD YOU HAVE TROUBLE ACHIEVING THE 2" OR LESS GAP THEN HAVE AN ASSISTANT GO UNDER THE CLATTER BRIDGE DECK AND HOLD UP THE MIDDLE OF THE CLATTER BRIDGE DECK. YOU CAN THEN ATTACH THE CHAIN ENDS TOGETHER UNDER THE DECK WITH THE QUICK LINK. AS BEFORE LOOP ANY CHAIN HANGING DOWN ON THE QUICK LINK BEFORE CLOSING IT.

7: VERIFY BOTH QUICK LINKS ARE CLOSED, EXCESS CHAIN HAS BEEN LOOPED UP AND THE 2" OR LESS GAP HAS BEEN ACHIEVED ON BOTH ENDS OF THE CLATTER BRIDGE DECK.
STEP 16: DRILLING ROOF SUPPORT HOLES

1: NOW YOU WILL DRILL HOLES FOR THE ROOF SUPPORTS FOR THE TOWER. THESE HOLES WILL NOT GO ALL THE WAY THROUGH THE CORNER POSTS SO EITHER USE MASKING TAPE ON YOUR DRILL BIT TO INDICATE THE DEPTH OR USE DEPTH STOPS. DEPTH STOPS ARE STEEL COLLARS WITH SET SCREWS THAT GO OVER DRILL BITS TO LIMIT DRILLING DEPTH. YOU MAY PURCHASE DEPTH STOPS AT LOCAL HARDWARE STORES IF YOU WISH.

2: YOU WILL NEED A DRILL WITH A 1/4" DRILL BIT FOR THIS STEP.

3: CLIMB UP ON TOP OF THE TOWER DECK AND FACE THE REAR OF THE TOWER. THE CLATTER BRIDGE DECK WILL BE DIRECTLY IN FRONT OF YOU.

**STEP 18: ROOF SUPPORTS**

1: PLACE THE TWO ROOF SUPPORT ASSEMBLIES ON THE DECK.

2: ATTACH ONE ROOF SUPPORT ASSEMBLY TO THE HOLES YOU PREVIOUSLY DRILLED IN THE REAR CORNER POSTS WITH TWO 3/8" X 3-1/2" LAG SCREWS AND TWO 3/8" WASHERS. NOTE THAT THE TRIANGLE SHAPED ROOF PEAK SUPPORT WILL BE ON THE OUTSIDE.

3: ATTACH THE OTHER ROOF SUPPORT ASSEMBLY TO THE HOLES YOU PREVIOUSLY DRILLED IN THE FRONT CORNER POSTS WITH TWO 3/8" X 3-1/2" LAG SCREWS AND TWO 3/8" WASHERS. NOTE THAT THE TRIANGLE SHAPED ROOF PEAK SUPPORT WILL BE ON THE OUTSIDE.
